OILS AND OIL SEEDS

As Full Member Analysts to the Federation of Oils, Seeds and Fats Association (FOSFA), we have many years of experience and expertise in the analysis of oils, oilseeds and fats.

Oils and Fats (Edible oils, Refined and Crude oils, cooking oils and fats)

Typical tests for quality assessment include:

- Fatty acid profile
- Moisture and volatile matter content
- Insoluble impurities
- Acid value
- Peroxide value
- Free fatty acids (FFA)
- Iodine value
- Saponification value
- Refractive index
- Relative density
- Unsaponifiable matter
- Colour (Lovibond)

Oil seeds (Sunflower, Sesame, Rape, Soyabeans, Groundnuts, Cottonseeds, Poppyseeds, Linseeds, etc.)

Typical analysis required for FOSFA contractual analysis:

- Moisture and volatile matter content
- Impurities (Admixture, Foreign Matter)
- Oil content
- Free Fatty Acids (FFA)

Many other tests are available. Please contact us with your requirements.
